

MICRO-TRANSFORMATION WITH MICRO APPS

SpotCues micro app platform enables enterprises to develop, deploy and manage single-purpose, context-specific, intelligent micro apps.

IMPROVE PRODUCTIVITY THROUGH SINGLE-PURPOSE APPS

Micro apps are mini applications that offers "In and Out" experience for accomplishing a specific task. Unlike typical apps that require navigating through a substantial and complex user interface, micro apps are simple HTML "cards" that present themselves contextually and through AI driven intelligent search.

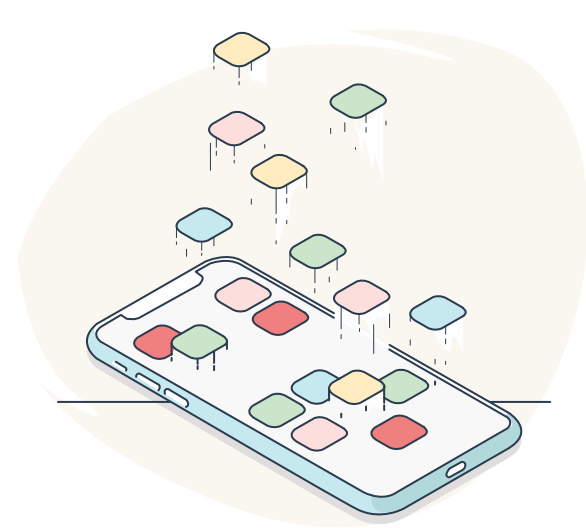

Task-specific Interface

Each micro app is designed for a specific purpose to help users complete tasks faster.

Intelligent Search

AI-enabled search experience intuitively understands the user intent and presents the most relevant micro app.

Everything in one place

All micro apps can be bundled into one single app to enable user to find all apps they need without requiring to switch between apps.

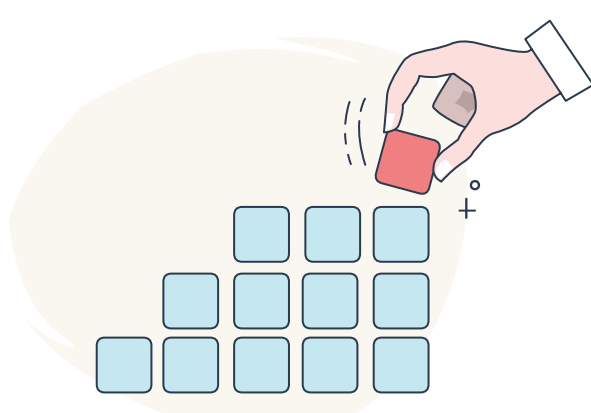

Integrated Sign-in

Single sign-on (SSO) and biometric authentication enable users to log in once and seamlessly switch between micro apps across multiple systems.

TAKE MICRO-TRANSFORMATIONAL APPROACH TO YOUR DIGITAL INITIATIVES

SpotCues platform enables enterprises to deliver single purpose apps to dramatically improve user experience and productivity and leverage a micro service based application architecture that provides agility and scale for new digital initiatives.

Incremental Approach

Single-purpose app concept dramatically reduces the complexity and the scope of developing new apps enabling enterprises to deliver new initiatives faster and in smaller increments.

Rapid Development

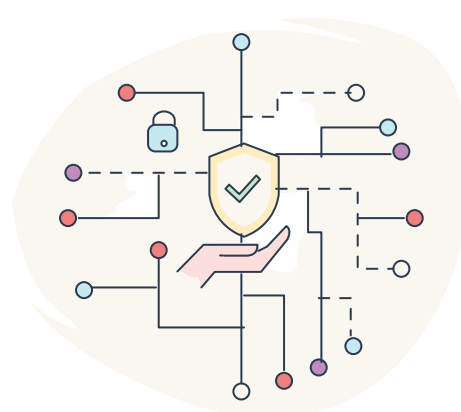

Rich Developer studio with pre-built templates enables enterprises to rapidly churn out new apps via low-code approach.

Lower TCO

HTML 5 based app development approach enables cross-platform compatibility, easy maintenance and dynamic upgrades.

Key Features

Enterprise-grade Security

Enterprise-grade security features such as biometric validation, 2FA, token-based authentication, data encryption, etc. to ensure security and compliance.

Multi-channel & Cross-compliant

Enable your users to access micro apps conveniently from the device and platform of their choice.

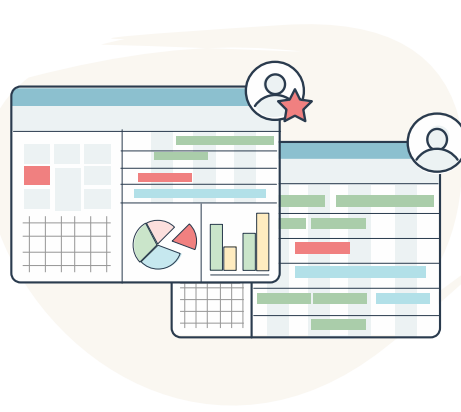

Dynamic Provisioning

HTML5 based approach enables enterprises to sidestep App Store and push the apps dynamically to their users.

Push Notifications

Each micro app can leverage the power of push notifications and create deep link to individual micro apps.

Contextual Access

Access to micro apps can be contextually made available or restricted based on role, department, location, etc.

Real-time Insights

Get deep insights into usage, usage pattern and adoption through rich real-time metrics.
